Rhabdomyosarcoma NGS Fusion Panel

Alternative Name

NGS Rhabdomyosarcoma Fusion Profile

Methodology

Molecular

Test Description

The NGS Rhabdomyosarcoma Fusion Profile is a targeted next-generation sequencing panel that can detect various translocations related to rhabdomyosarcoma in the genes FOXO1, NCOA2, and TFE3.

Clinical Significance

The diagnosis and subclassification of rhabdomyosarcoma is very important for diagnostic, prognostic and treatment purposes. Several genetic abnormalities are associated with specific subtypes of rhabdomyosarcoma. In addition, alveolar soft part sarcoma is a soft tissue sarcoma that may be easily confused with certain types of rhabdomyosarcoma. This fusion profile is designed to aid in the diagnosis and subclassification of rhabdomyosarcoma and to identify cases of alveolar soft part sarcoma.

Specimen Requirements

- **FFPE tissue:** Paraffin block is preferred. Alternatively, send 1 H&E slide plus 5-10 unstained slides cut at 5 or more microns. Please use positively-charged slides and 10% NBF fixative. Do not use zinc fixatives.

Storage & Transportation

Use cold pack for transporting block during summer to prevent block from melting. Slides can be packed at room temperature.

NeoGenomics Laboratories is a specialized oncology reference laboratory providing the latest technologies, testing partnership opportunities, and interactive education to the oncology and pathology communities. We offer the complete spectrum of diagnostic services in molecular testing, FISH, cytogenetics, flow cytometry, and immunohistochemistry through our nation-wide network of CAP-accredited, CLIA-certified laboratories.

Committed to research as the means to improve patient care, we provide Pharma Services for pharmaceutical companies, in vitro diagnostic manufacturers, and academic scientist-clinicians. We promote joint publications with our client physicians. NeoGenomics welcomes your inquiries for collaborations. Please contact us for more information.
